The short-time Fourier transform (STFT), is a Fourier-related transform used to determine the sinusoidal frequency and phase content of local sections of a signal as it changes over time. In practice, the procedure for computing STFTs is to divide a longer time signal into shorter segments of equal length and then compute the Fourier transform ...

Historically, the advancement of the SMP field has been closely associated with its practical potential. As such, the lack of excitement and research activities in the early days of SMPs can be attributed to the limited applications envisioned for such materials.
