Hypothetical types of biochemistry are forms of biochemistry speculated to be scientifically viable but not proven to exist at this time. The kinds of living organisms currently known on Earth all use carbon compounds for basic structural and metabolic functions, water as a solvent, and DNA or RNA to define and control their form.

**Hypothetical types of biochemistry - Wikipedia**

Bioenergetics is a field in biochemistry and cell biology that concerns energy flow through living systems. This is an active area of biological research that includes the study of the transformation of energy in living organisms and the study of thousands of different cellular processes such as cellular respiration and the many other metabolic ...

In addition to using orthogonal methods, such as SV-AUC or DLS, to confirm the results observed by SEC indirectly, as previously noted, the direct characterization of the peaks separated by SEC is commonly performed using multi-angle light-scattering (MALS) detectors.
