Experimental and theoretical specific optical rotations (OR) of anhydro, epithio, and epiminoderivatives of methyl tetraofuranosides in chloroform solutions have been compared and used as a tool for exploring their conformational behavior.

1. Introduction Most organic and inorganic compounds of pharmaceutical relevance can exist in one or more crystalline forms. When applied to solids, the adjective, crystalline, implies an ideal crystal in which the structural units, termed unit cells, are repeated regularly and indefinitely in three dimensions in space.

Toxoplasmosis is a parasitic disease caused by *Toxoplasma gondii*. Infections with toxoplasmosis usually cause no obvious symptoms in adults. Occasionally, people may have a few weeks or months of mild, flu-like illness such as muscle aches and tender lymph nodes. In a small number of people, eye problems may develop. In those with a weak immune ...

Abstract. Division of amoebas, fungi, and animal cells into two daughter cells at the end of the cell cycle depends on a common set of ancient proteins, principally actin filaments and myosin-II motors.

Four on-lattice and six off-lattice models for active matter are studied numerically, showing that in contact with a wall, they display universal wetting transitions between three distinctive phases.

The flexible simple point-charge water model (or flexible SPC water model) is a re-parametrization of the three-site SPC water model. The SPC model is rigid, whilst the flexible SPC model is flexible.

In general, a RRAM cell is composed of a conductor/insulator (or semiconductor)/conductor sandwich structure, as shown in Fig. 1a. This simple structure enables it to be easily integrated in passive crossbar arrays with a small size of $4F^2$ (F is the minimum feature size), and the size can be further reduced to $4F^2/n$ within vertically stacked ...

ABSTRACT. Polymorphism in solids is a common phenomenon in drugs, which can lead to compromised quality due to changes in their physicochemical properties, particularly solubility, and, therefore, reduce bioavailability.
