A composite material (also called a composition material or shortened to composite, which is the common name) is a material made from two or more constituent materials with significantly different physical or chemical properties that, when combined, produce a material with characteristics different from the individual components.

Composite material - Wikipedia

Box and Cox (1964) developed the transformation. Estimation of any Box-Cox parameters is by maximum likelihood. Box and Cox (1964) offered an example in which the data had the form of survival times but the underlying biological structure was of hazard rates, and the transformation identified this.

Glossary of research economics - econterms

Ventilation is the intentional introduction of ambient air into a space and is mainly used to control indoor air quality by diluting and displacing indoor pollutants; it can also be used for purposes of thermal comfort or

dehumidification.

Ventilation (architecture) - Wikipedia

Design & Detailing of Water Retaining Structures & Pre Cast Water Tank Floor System

Design of Liquid Retaining Concrete Structures - R.D. Anchor

Desalination is a method for producing water for human consumption, irrigation or industrial utilisation. In this study, a reverse osmosis (RO) system for brackish water desalination was theoretically investigated to produce both potable drinking and agricultural water with a lower overall and specific energy consumption.

An operational and economic study of a reverse osmosis

In FDM method, a continuous filament of a thermoplastic polymer is used to 3D print layers of materials (Fig. 1a). The filament is heated at the nozzle to reach a semi-liquid state and then extruded on the platform or on top of previously printed layers.

Additive manufacturing (3D printing): A review of

A range of printers specifically designed for the Textile and Apparel market; enables direct and sublimation printing onto a wide range of fabrics and garments.
