A transformer is a static electrical device that transfers electrical energy between two or more circuits. A varying current in one coil of the transformer produces a varying magnetic flux, which, in turn, induces a varying electromotive force (emf) or "voltage" across a second coil wound around the same core.

Transformer - Wikipedia

1.) A BODE plot consists of separate magnitude and phase drawings versus frequency (in logarithmic fashion). Thus, EACH transfer function of a four-pole can be visualized this way.

Why is it that in a Bode plot realization we consider open
