2 MOTOR STARTING All motors must have a control device to start and stop the motor called a "motor controller". Motor Controller A motor controller is the actual device that energizes and de-energizes the circuit to the motor so

Electric Motor Controls - Process Control and Instrumentation

In an electric vehicle (EV) or hybrid electric vehicle (HEV), inverters convert DC power, typically from a battery, to alternating phases of power to drive multi-phase motors. The two key performance measures are power capabilities and efficiency. Typical motor control functions include driving IGBT
