B. Schaeffer 203 Figure 2. The binding energies per nucleon of 2H and 4He are calculated with Coulomb, electric, and Poisson, magnetic, fundamental laws, without phenomenological parameters.

Electromagnetic Theory of the Nuclear Interaction

After one century of nuclear physics, its underlying fundamental laws remain a puzzle. Rutherford scattering is well known to be electric at low kinetic energy.

The neutron, discovered in 1931 by Chadwick, seeming to be uncharged, the electromagnetic hypothesis of the nuclear interaction was abandoned. The magnetic moments of the proton and of the deuteron were discovered in 1932 by Stern [5] and the magnetic moment of the neutron in 1938 by Bloch [6]. Assuming the additivity of the magnetic moments, he found that, in the deuteron, the magnetic ...

Resonant Electromagnetic Interaction in Low Energy Nuclear

The electromagnetic interaction, because it allows to explore not only the wave functions but also the intimate nature of the charge and current densities in the nucleus, provides a unique tool for determining the constituent particles of a nucleus and their interactions.
