In theories of quantum gravity, the graviton is the hypothetical elementary particle that mediates the force of gravity. There is no complete quantum field theory of gravitons due to an outstanding mathematical problem with renormalization in general relativity.

General relativity (GR, also known as the general theory of relativity or GTR) is the geometric theory of gravitation published by Albert Einstein in 1915 and the current description of gravitation in modern physics.

La relativité générale est une théorie relativiste de la gravitation, c'est-à-dire qu'elle décrit l'influence sur le mouvement des astres de la présence de matière et, plus généralement d'énergie, en tenant compte des principes de la relativité restreinte.
