Mechanics of Granular Media: Experiments, Theory and Modelling

Taking mechanics of granular media as a basic science brings to the front the problems of formulation and analysis of nonlinear differential equations describing behavior of granular media, and trying the analytical and numerical solutions to boundary-value problems.

In particular, a new approach toward developing a non-local micropolar constitutive model of granular media using micromechanics and internal variable theory is discussed. To demonstrate the predictive potential of these models, we present their application in the analysis of two fundamental problems to the mechanics of granular media: (i) formation and evolution of shear bands (the precursors ...
