Neutral earthing in an industrial HV network

Earthed neutral in the secondary side of Tx to from a TT earthing system is required as per local code requirement. There is a debate about whether it is necessary to provide PVC sheath conductor or just bare conductor for the earthed neutral (i.e. from the star point to the earth electrode).

Types of neutral earthing in power distribution (part 1)

Earthing system How to choose the right system earthing arrangement? Application note Technical collection In order to ensure protection of persons and continuity of operation, the conductive wires and live parts of an electrical installation are "insulated" from the earthed exposed conductive parts. Insulation involves: separation by insulating materials separation by linear clearances in ...
