RESULTS AND DISCUSSION. Global production of resins and fibers increased from 2 Mt in 1950 to 380 Mt in 2015, a compound annual growth rate (CAGR) of 8.4% (table S1), roughly 2.5 times the CAGR of the global gross domestic product during that period (12, 13).

Production, use, and fate of all plastics ever made

1. Introduction. In the 21st century, the trend of science and technology is tending towards environmentally friendly materials, renewable resources and energy, as well as sustainable techniques and processes.

Recent advances in regenerated cellulose materials

This review reports the recent advances in the most important and straightforward synthetic protocols for incorporating catechols into (bio)polymers, and discusses the emerging applications of these innovative multifunctional materials in biomedical, energy storage and environmental applications.

Recent Advances in the Synthesis of Catechol-Derived (Bio

Abstract. Plastic debris in the marine environment is widely documented, but the quantity of plastic entering the ocean from waste generated on land is unknown.

The inherent specificity and electrochemical reversibility of enzymes poise them as the biorecognition element of choice for a wide range of metabolites. To use enzymes efficiently in biosensors, the redox centers of the protein should have good electrical communication with the transducing electrode, which requires either the use of mediators ...

Abstract: Efficient vertical mobility is a critical component of tall building development and construction. This paper investigates recent advances in elevator technology and examines their impact on tall building development.

Plastic is material consisting of any of a wide range of synthetic or semi-synthetic organic compounds that are malleable and so can be molded into solid objects.

Bulletproof glass (also known as ballistic glass, transparent armor, or bullet-resistant glass) is a type of strong, but optically transparent, material that is particularly resistant to being penetrated when struck.

As new research on the production, life cycle, and impacts of plastic debris become available, Surfrider Foundation continues to assemble this list of credible plastic pollution statistics and figures, sourced mainly from peer-reviewed, published studies.

That's a \$176 billion problem, the potential energy savings scientists say could be achieved from recycling all global plastic solid waste. But new approaches can increase the amount of plastic ...

Scientific advances can make it easier to recycle plastics

Engineering polyesters are engineering thermoplastics based on PBT (Polybutylene terephthalate) and PET (Polyethylene terephthalate). Polyester resins combine excellent mechanical, electrical and thermal properties with very good chemical resistance and dimensional stability.

Several groups have engineered polymer conductors in recent years, including Chen's group, which in 2010 invented a method to create "ultradrawn nanofibers" from a standard sample of polyethylene.

Engineers turn plastic insulator into heat conductor

Bangladesh Bangladesh has several recent experiences using mobile financial services to make government-to-person (G2P) payments in various social protection programs.
