A double layer (DL, also called an electrical double layer, EDL) is a structure that appears on the surface of an object when it is exposed to a fluid. The object might be a solid particle, a gas bubble, a liquid droplet, or a porous body. The DL refers to two parallel layers of charge surrounding the object.

Theory of the electric double layer of stabilized emulsions

An electrical double layer is the name given to any region between two different phases when charge is separated across the interface between them. In aqueous corrosion, this is the region between a corroding metal and the bulk of the aqueous environment (â€œfree solutionâ€•).
